

YOUR T5

Printed, built and sound-tested by hand.

Every bell on this horn was printed solid, assembled, sealed and blown before it left the shop. Thank you for buying one. If anything is not right, write to me and I will make it right.

Read these first

1. **Hearing.** It is extremely loud. Wear hearing protection to test it. Never sound it near people or animals.
2. **Its own air.** Never tee into vehicle air brakes. Pressure switch, tank with a relief valve, 1/2 in inside-diameter hose and full-bore fittings.
3. **Bolts.** Hand tools only, no drill or impact gun. Foot: 1/2-13 bolts, SAE flat washers and nylock nuts, never lock washers (manual, page 13). Foot, wings and pads: finger tight plus a quarter turn, then stop. Rear caps: nylock nuts, star pattern, stack held centred. **Cracks from over-tightening are not covered.**
4. **Heat.** Keep it 12 in from the exhaust and anything hot. The plastic softens at 158 °F.
5. **First run.** Fill the tank to about 50 psi only, then step up while checking for leaks and cracks (manual, page 16).
6. **The law.** Check the rules where you use it.
